Practical-5

Registration Form with Frontend Validation and User-Friendly Error Handling

Theory

1. Are correct input types and attributes used?

Answer: Yes, suitable types like email, password, and date are used to make input easier and more accurate..

2. Are validation errors displayed near the relevant fields?

Answer: Yes, errors are shown near the field so the user can easily understand what needs to be corrected.

3. Is password strength checked?

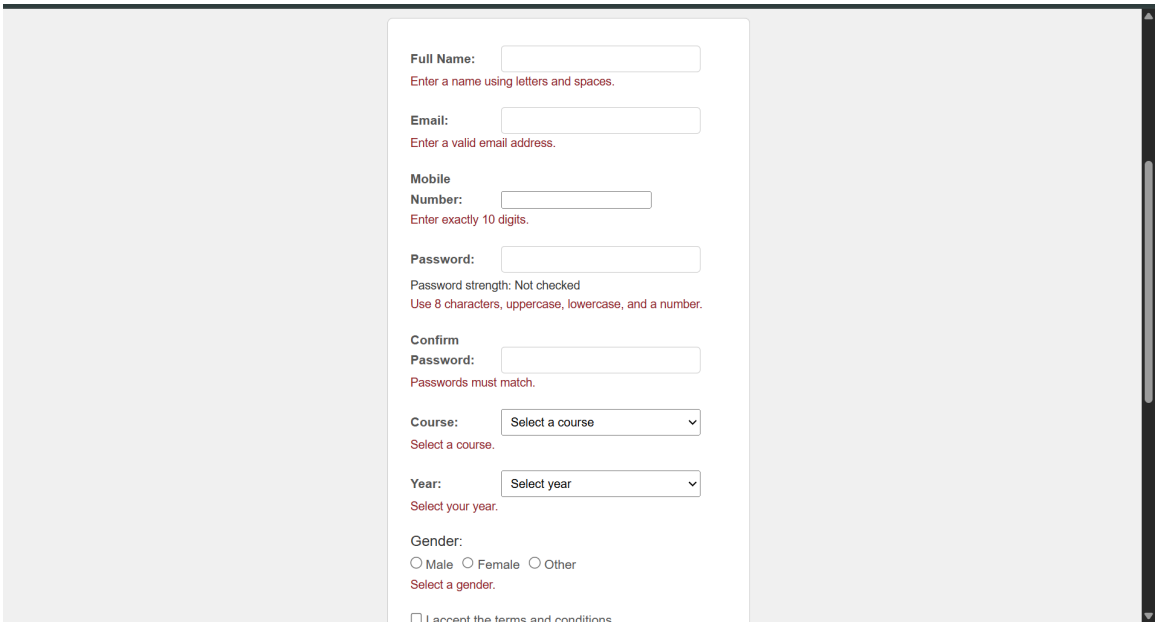

Answer: Yes, the password is checked using rules like uppercase, lowercase, number, and special character.

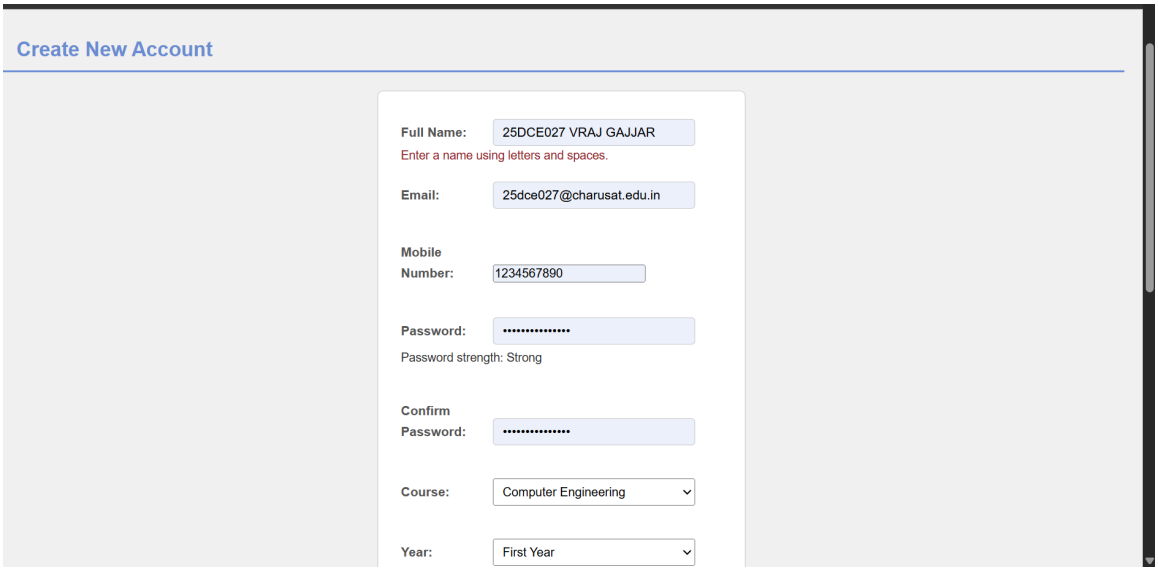

4. Is the form accessible using keyboard and screen-reader-friendly labels?

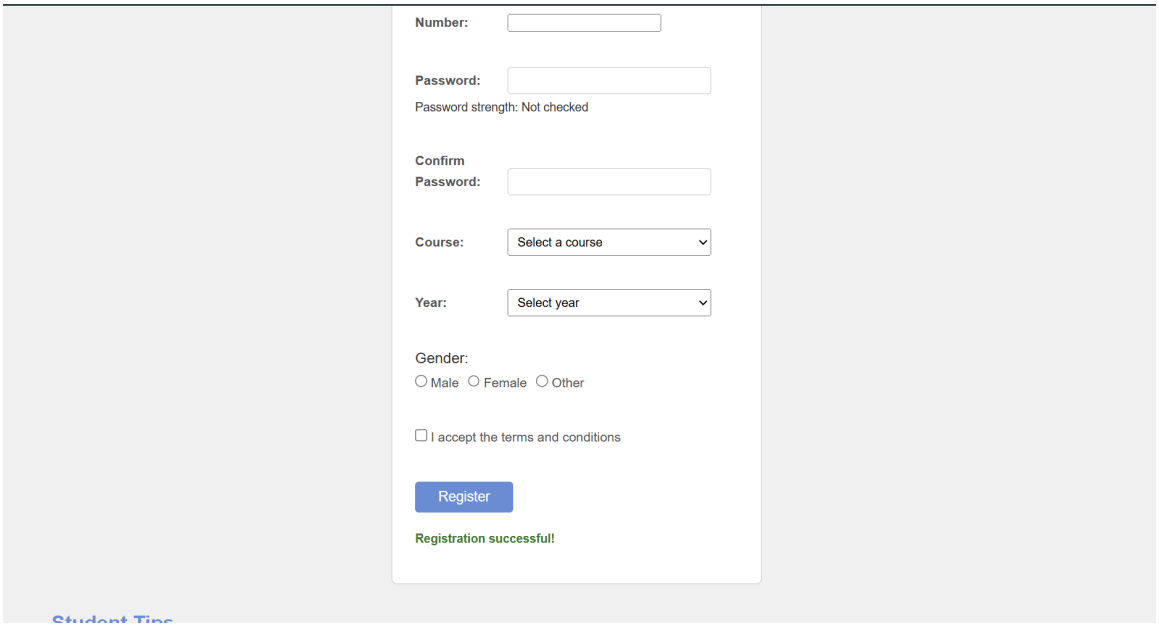

Answer: Yes, proper <label> tags are used, and the form can be operated using the keyboard and understood by screen readers.
